

Open iT Software Suite v6.3

Release Version 6.3

7th March 2014

Copyright © 2014 Open iT, Inc.

Dear Customer,

Thank you for choosing the **Open iT® Software Suite** – a tool that meters, analyzes, and optimizes usage of critical IT assets. We are pleased to announce the official release of **Open iT® Version 6.3**.

Open iT Software Suite version 6.3 offers a host of new features and functionalities for the **Reporting Server** and **Analysis Server** as well as the two modules, **SystemAnalyzer** and **LicenseOptimizer**. This version also marks the support for seven (7) new additional license managers. Furthermore, we introduce the **Open iT License Monitor Mobile Application** for Android and Windows phones!

New Features in Reporting Server

- **Generate Excel Reports Without ActiveX** – allows for increased security and the ability to export Excel reports in Chrome, Safari and other browsers apart from Internet Explorer.
- **Reset Password** – allows the Administrator to reset the passwords of ordinary users.
- **Change Password** – allows the users to change their own passwords as they please.
- **Server Disk Space Warning** – prevents the users from logging in to the server when the server disk space is insufficient. This is done to avoid malfunctions and unexpected behaviors on the server. A warning will be flashed on the web GUI.
- **Product and Feature Access** – makes sure that if a particular product is selected for hiding, all of its features are also automatically hidden and will not appear on the list of features.
- **Denial Report by Denial Reason** – allows for the ability to report FlexNet denials drilled down to reasons for the denial. This feature is also available in the **Analysis Server**.
- **Apache Upgrade** – HTTP Server is now version 2.2.x.

New Features in Analysis Server

- **Interactive Alerts Dashboard** – new web-based dashboard, customizable per user profile.
- **Customized Alarms**
 - Alarms when license utilization of exceeds a certain threshold
 - Alarms when license is checked out for a long period of time
 - Alarms when third-party license expires
 - Alarms when user hogs licenses
 - Alarms when a license server is down or inaccessible for a certain threshold of time.
