Open iT Software Suite Version 6.5

Official Release

January 2017

Thank you for choosing the Open iT® Software Suite – a tool that meters, analyzes, and optimizes usage of critical IT assets. We are pleased to announce the official release of Open iT® Version 6.5.0.

Open iT Software Suite version 6.5.0 offers a host of new features and functionalities for Core Server, Analysis Server, Reporting Server, StorageAnalyzer and SystemAnalyzer.

New Features in Core Server

- **Dongle Data Reporting Support**
 - Support for Backend Reporting for Wibu Dongle
 - Support for Backend Reporting for Vector Dongle
- **Support for reporting data of different dongle-based inventory module**
- **Support for Reporting Autodesk data**
 - Support for inventory and usage analysis for Autodesk data.
- **Improvements in Job Scheduling**
 - Improved balance processing between intense jobs and "light" jobs.

New Feature in StorageAnalyzer

- **Create a log file containing filenames**
 - A log file containing a list of filenames which are considered as inactive. This log file remains in the client side since it grows in size.

New Feature in SystemAnalyzer

- **Autodesk Data Collection**
 - Collection of essential Autodesk data for reporting considering different types of licensing.

New Features in Analysis Server

- **Database Cleanup**
 - A facility to limit or cleanup the data processed in the SQL Database of Analysis Server. This is to avoid long processing time of unnecessary data.
- **Customizable email messages for user alerts**
 - A web interface to customize the messages and the interface used in the email sent by the alert system to users.
- **Selective User Anonymization**
 - A support of confidentiality in reporting. It gives the ability to hide user information in real-time dashboard and reports of Open iT.
- **Product Labelling**
 - A web interface for renaming or giving a defined name for products collected by Open iT. This gives predefined labels for some products and gives priority to defined labels.
- **License Monitor Portal Improvements**
 - Ability to show/hide .Flood Email. And .Alert Users.
 - Ability to control who can use said option in the alert system.
 - Show the owners of public dashboards
 - Show the meta data of the License Manager
 - Including the server names, ports and license files path.
