

StorageAnalyzer™

Storage Devices Metering

Key Benefits

- Helps reduce the cost of storage
- Allows IT to charge accurately for storage services
- Enables proactive storage management
- Uncovers unnecessary data that can be moved to cheaper media or deleted
- Provides accurate basis for planning new and optimized disk investments
- Provides a tool for backup control

- Provides a centralized overview of storage resources
- Uncovers trends and bottlenecks for storage resources
- Improves performance through storage optimization
- Allows for accurate and flexible IT budgeting and chargeback

Open IT StorageAnalyzer delivers an overview of disk and backup data, enabling optimal data storage management. It shows trends and potential capacity problems, and provides an accurate basis for charging for data storage services.

How StorageAnalyzer Works

StorageAnalyzer monitors files, file systems, disks and backups and reports on these resources which allows for the optimization of storage resources and enables accurate billing for storage services. Among the data available are:

- Disk usage for each user classified by file type
- Disk usage by project
- Total, used and free space on each file system
- File owner and group
- Read and write temperature for files, as well as last access and modification
- Which and how much data has been backed up or archived
- Which file systems have been migrated

Discover storage trends, budget more accurately and prevent system failures using StorageAnalyzer's trend reporting across multiple storage resources. ▲

Open IT Software tools* that analyze and optimize your IT resources:

LicenseAnalyzer™

Provides an enterprise view of software applications enabled by license managers, showing when and by whom they are used over time, by location, business unit or project group. Enables chargeback accounting, usage-based license agreements, accurate workflow analysis and optimal license usage.

LicenseOptimizer™

Monitors activity levels for installed applications and can free up unused licenses for active users on high priority projects, delivering extremely targeted license management.

SystemAnalyzer™

Measures CPU, memory and I/O usage for all applications, users, and hosts, as well as application usage and inventory for PCs and workstations. Permits fine-tuning of machine capacity and chargeback or usage accounting for a variety of system-wide IT functionalities.

StorageAnalyzer™

Delivers an overview of disk and backup data, enabling optimal data storage management. Shows trends and potential capacity problems and provides an accurate basis for charging for data storage services.

ApplicationTracker™

Monitors activity levels of all applications on Windows and Unix platforms. Includes an independent licensing method system that can run without using wrappers.

UsageAnalyzer™

Tracks keyboard and mouse activities to find inefficient computer user patterns and to monitor activity levels of user/hosts and applications.

*Supports Unix and Windows platforms.

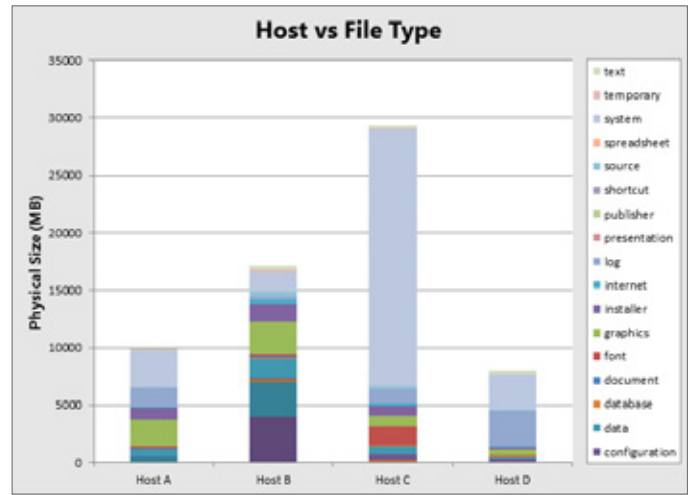

Flexible & Customizable Reporting

Open IT Software offers two flexible reporting servers.

Reporting Server is a reporting tool with proprietary database that gives users the ability to generate reports based from collected license usage data.

Analysis Server is an SQL-based reporting tool that enables users to make reports based from the data that has been collected. It includes a web interface that enables users to create customizable report templates. It also includes a real-time license monitoring system, an alert system for license usage, a powerful user profile definition system, and excel-based dashboards.

Based on extensive customer feedback and over a decade of experience, each Open IT module comes with a standard set of reports. With customizable templates, completely new reports can be easily built based on specific needs. Reports can be generated on a scheduled basis or created on demand. Each scheduled report can be customized to determine availability, frequency, resolution and data coverage. Choose from pie charts, line plots or tables for report formats and change the format on the fly for easy data analysis. With a single click, reports can be viewed in Microsoft® Excel™ for further work and may be shared with internal and external resources such as chargeback invoicing. Analysis Server is only available for Windows.

Sample report that identifies the physical size of file types used by hosts. ▲

Account Information:
 Name: PH
 Cost Center: PH
 Invoice Dates: 2013-04-10

Billing Summary:
 Period: 2012-12-01 00:00 to 2013-01-01 00:00
 Fixed Charges: \$10.00
 Usage Charges: \$623.60
 Total Amount: \$633.60

Charges Detail

Fixed Charges						\$10.00
Type	Host Name	Filesystem	Unit	Units Included	Amount	
Storage	MILLTOWN	C	AVG-MB 1M	30.00	\$3.00	
Storage	MILLTOWN	C	AVG-MB 1M	30.00	\$3.00	

Usage Charges						\$623.60
Type	Host Name	Filesystem	Unit	Total Usage	Exceeding Usage	Amount
Storage	MILLTOWN	C	AVG-MB 1M	25.48	15.48	\$52.40
Storage	MILLTOWN	C	AVG-MB 1M	116.24	106.24	\$571.20

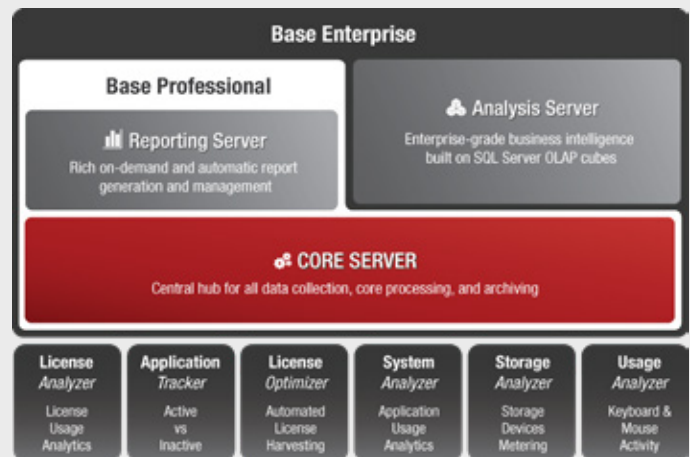

Generate IT audit reports to easily assign the cost of storage resource usage to user groups, projects, business units or even global sites. ▲

Open IT Software Suite

The Open IT Software Suite is a client/server based solution containing reporting tool mechanisms. The Open IT Core Server is the central hub for data collection, storage and processing. It receives collected usage data from optional client modules, which are installed on areas of the IT infrastructure targeted for usage monitoring. Processed data is then made available by the Core Server to the rest of the Open IT system for reporting and asset management purposes.

“
 Open IT is an indispensable tool
 for monitoring and managing
 our data resources.
 ”
