

# WHAT WOULD HAPPEN

if your organization has

## POOR Asset Management Program

### DENIALS

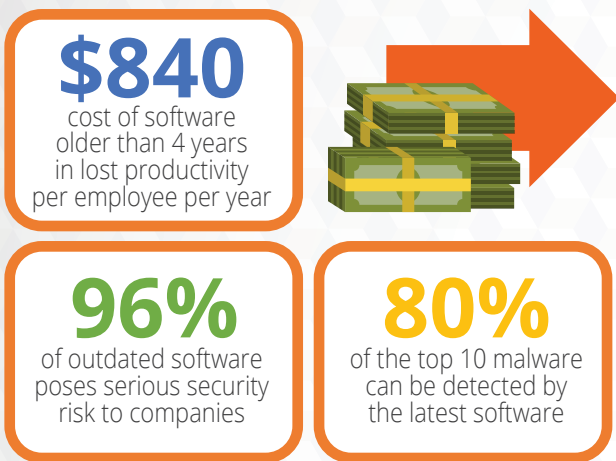

Dozens of software license denial notifications and user complaints flood IT help desk because of this. It can be quite overwhelming for them to balance user demands against a very limited IT budget.

### UNUSED SOFTWARE

The total value of waste represents the amount of money already spent on software that was deployed and then unused. Based on 1E Report: The Real Cost of Unused Software

### OUTDATED SOFTWARE

Outdated software exposes organizations to security breaches & compliance violations allowing hackers to target known vulnerabilities to gain unauthorized access. Based on Nuance study: Dangers of using outdated software

### LICENSE HOGS & CAMPERS

A license hog unnecessarily checks out or uses multiple licenses simultaneously while a license camper checks out a license and keeps it even when he is not using it to ensure it is available when the time comes that he may need to use it.

## EFFECTIVE Asset Management Program

IT asset managers must choose tools that could collect accurate and complete software usage information to understand their organization's true software usage and improve workforce productivity.
