

5 WAYS TO USE ACTIVE / INACTIVE METRICS

1

Manage even wider selections of expensive software

Allows for easy tracking of node-locked, dongle-based or other applications that do not use a common license manager

4

Enable Cost Savings

Identify opportunities to reduce costs within the current IT budget by tracking actual license usage

2

Optimize application usage

Discover applications that are not being actively used, based on their unique CPU, I/O, mouse or keyboard activity levels

3

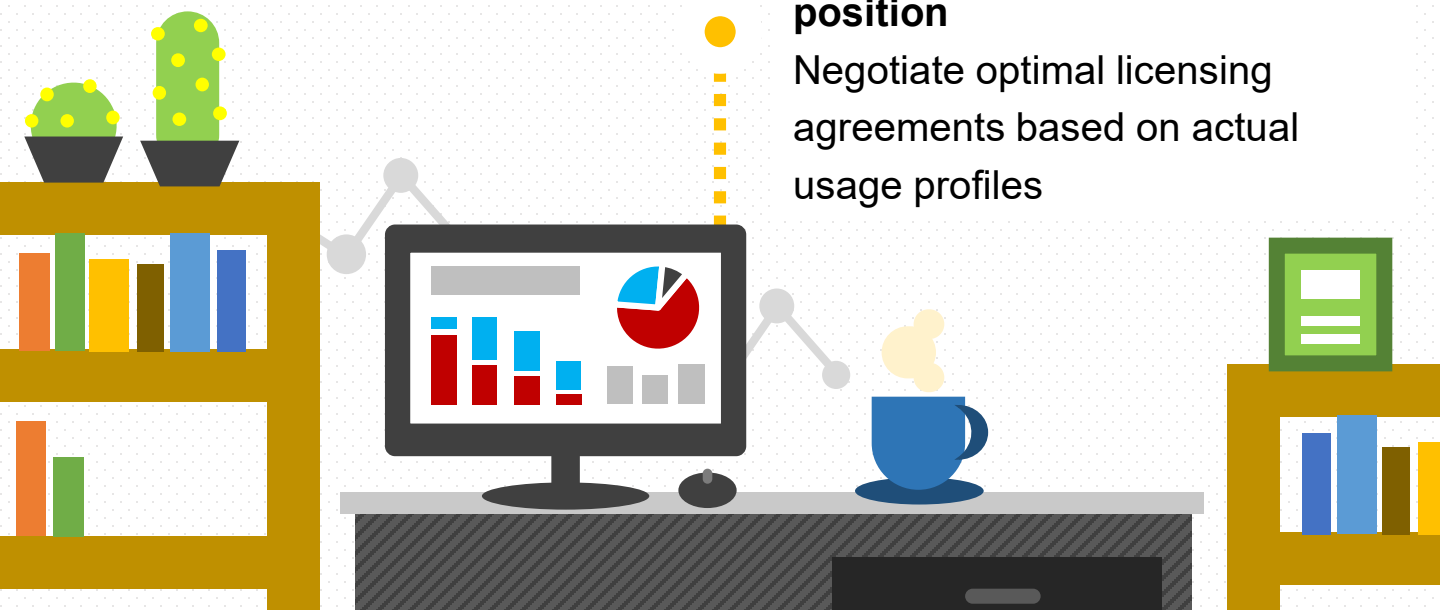

Improve User Productivity

Discover and eliminate behavioral factors that constrain application availability

5

Attain better negotiating position

Negotiate optimal licensing agreements based on actual usage profiles
