Open iT® Analyzer for Autodesk® Licensing

☑ Meter and optimize Autodesk regardless of license agreement and installation type

☑ Avoid unnecessary costs on Autodesk licensing and maintenance

☑ Generate accurate usage reports as basis for internal billing based on actual use

KEY BENEFITS

- Find out what type of licenses (network, standalone, free trial) are being used

- Provide an enterprise-wide view Autodesk license usage in real-time

- Generate IT audit reports to easily assign the cost of Autodesk license usage to user groups, projects, business units or even global sites

- Easily create customizable reports on software usage of all Autodesk applications

Open iT Analyzer for Autodesk® Licensing helps cut software license costs and reduce wastage on license usage by monitoring activity levels of all Autodesk applications regardless of licensing type. It allows administrators in an organization to manage these costly resources by providing an enterprise view of Autodesk licenses, showing when and by whom these licenses are used over time, by location, business unit or project group, for all types of Autodesk licenses:

Perpetual Licenses

As of January 2016, Autodesk stopped selling new perpetual licenses, but those that have yet to switch to subscription-based licenses can still renew their maintenance and support, which had a price hike in 2017.
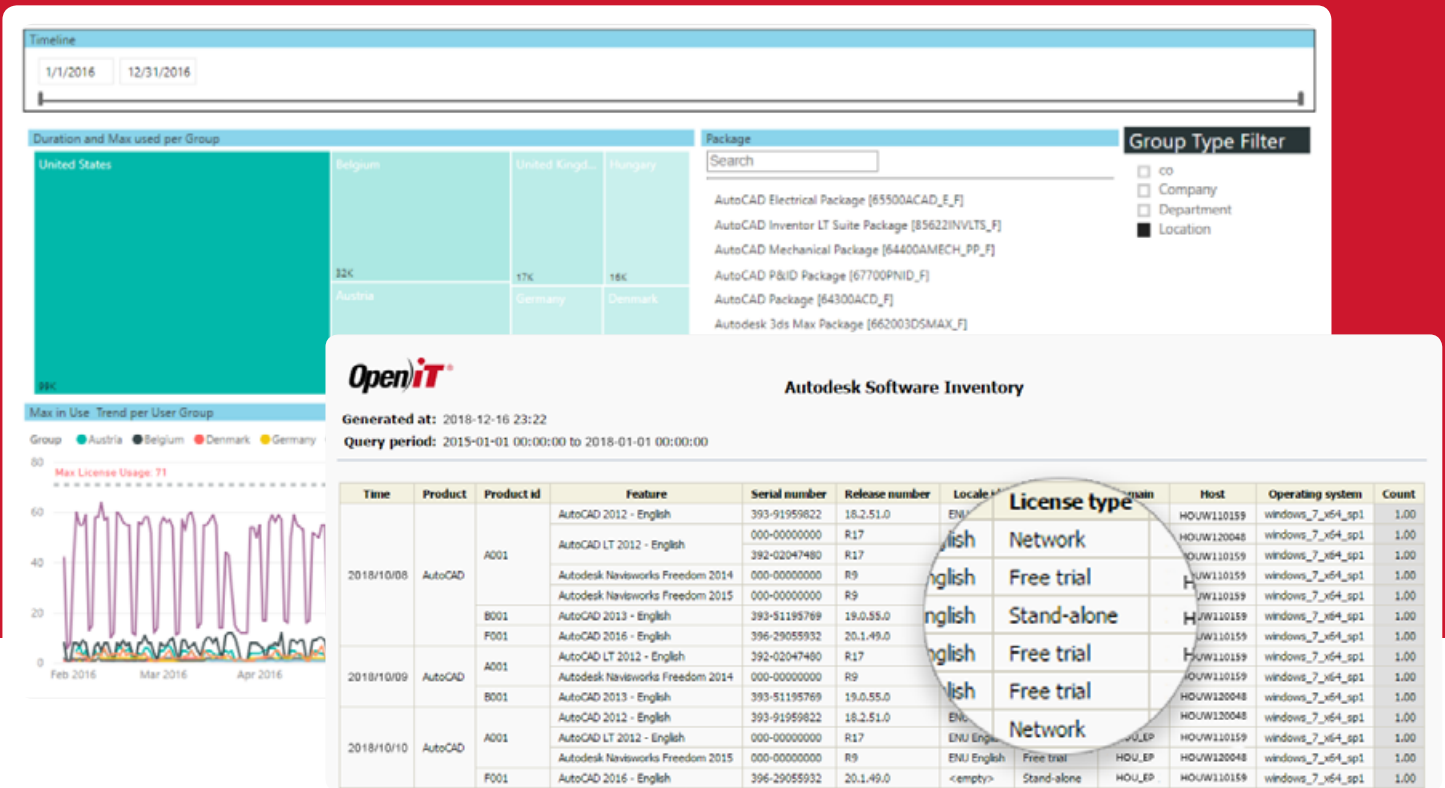

360 Product Line

This can be accessed and used on web, mobile, desktop, and do not use a license manager.

Subscription-based Licenses

Standalone License – A user with a stand-alone license can download and install the software assigned to them on up to three devices, but can use only one of the devices at a time.

Network License (Multi-User Licenses) – Administrators can install a product on an unlimited number of devices, but the total number of people accessing the product at one time is limited to the number of purchased seats.

- MultiFlex – Global concurrent license

- Token-Flex – An organization has a set pool of tokens that is renewed on a yearly basis. Each individual feature/ product then has it's own token cost. This cost is withdrawn from the organization's overall pool of tokens when a user opens an application or uses a feature

- Local concurrent license agreement

COLLECTION-PACKAGE-FEATURE MAPPING

Unlike our competitors, Open iT has the ability to rename cryptic and confusing application names to much more recognizable and easy-to-read application names, which can even be mapped to the vendor's price book.

TOKEN-FLEX LICENSE USAGE

- Token-Flex is based on *Distinct User per 24-hour period * Token Cost*, which is supported out-of-the-box

- Supports data filtering to match license agreement e.g. : include only usage >= 5 minutes

- Hourly reporting to help identify the best 24-hour definition

- Supports changing of time zone in reporting to cater agreement's 24-hour definition

ABOUT OPEN IT, INC.

Open iT metering and optimization tools equip Software and IT Asset Managers with advanced usage analytics to simplify the complexities of managing specialized engineering applications across a variety of license managers as well as other applications and web applications that are not using license managers.

Open iT solutions provide fully customizable usage reporting, granular chargeback for software license usage, and automated, industry-leading license harvesting capabilities across Windows, Unix and Linux platforms.
