

# TOKEN-BASED LICENSES 101

Token-based licenses are floating licenses.

Customers buy a pool of tokens from application vendors.

Each product has a corresponding price.

## TOKEN MENU

Product	Tokens
A	4
B	5
C	10

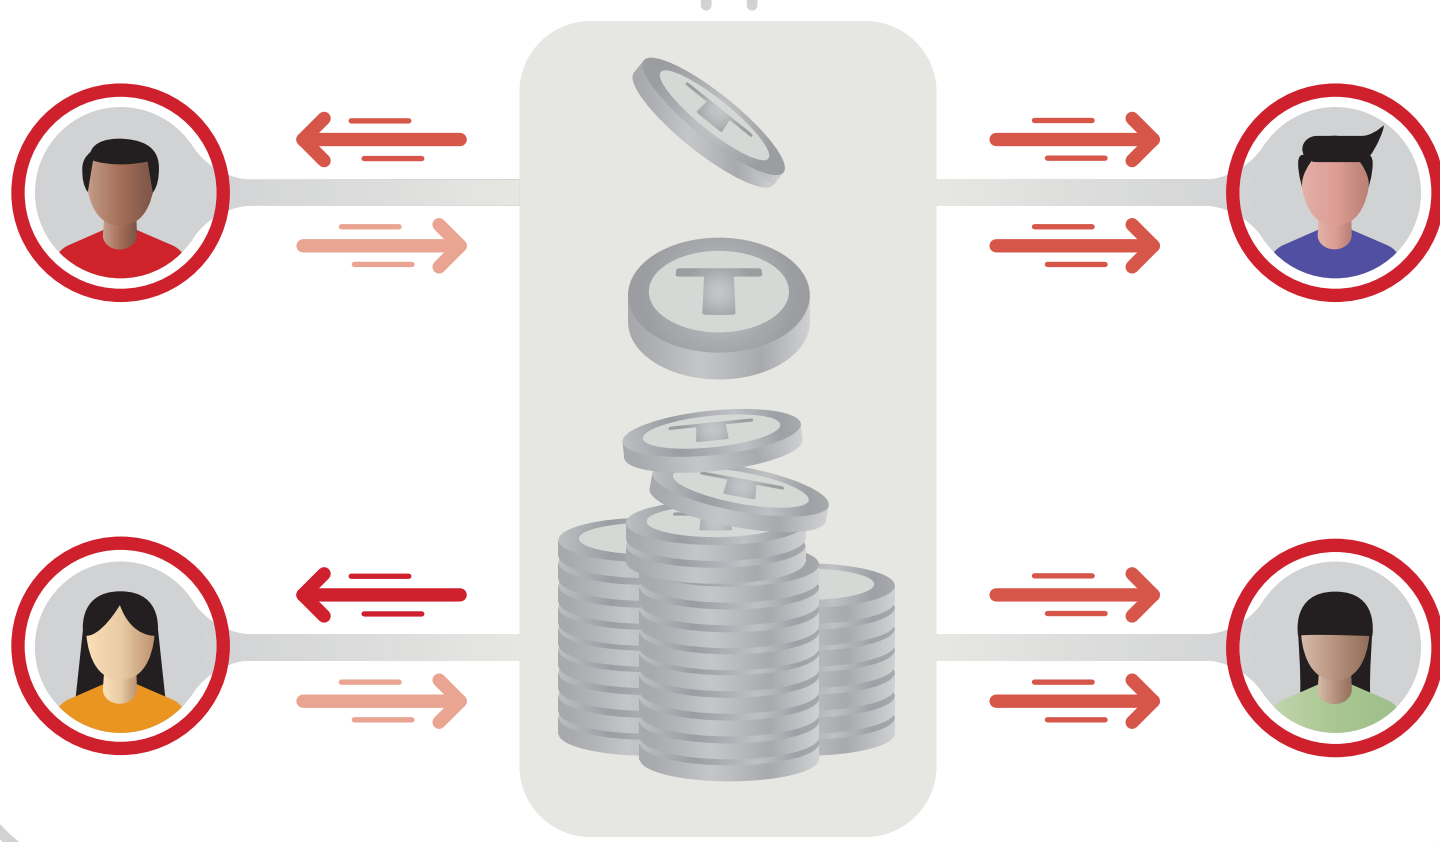

**100** = 25 A Products  
**TOKENS** = 20 B Products  
= 10 C Products

Or any other combination as long as it is within the purchased number of tokens!

There are two types of tokens.

The first type replenishes at the end of a cycle period after a user terminates the application.

The second type is a pay-as-you-go model in which tokens are no longer available upon consumption.

Tokens expire and become unusable after a specified period.

Token-based licensing is beneficial to organizations that value flexibility in their subscriptions. However, without proper monitoring, these can become costly in the long run.

Like other licenses, token usage can be tracked and maximized. Open iT solutions provides advanced metering and reporting solutions for token-based licenses. Learn more about how Open iT can help your company optimize your tokens.
