

# Enhance Hexagon ISL License Usage Reporting with Open iT

## Boosted ISL Reporting

Hexagon ISL offers basic license usage reporting for its applications. Open iT enhances these functionalities with:

Hexagon ISL is a cloud-based license management solution developed by Hexagon for its comprehensive suite of engineering and design tools, including CADWorx, CAESAR II, FEATools, SmartSketch, Spoolgen, and Smart Isometrics.

### Consolidated Data

Capture and combine detailed license usage from Hexagon's keystores and SPLM.

### Enhanced Visibility

Access deep insights into who uses the licenses, usage frequency, and patterns.

### Comprehensive Reporting

Provide extensive metering and monitoring beyond the basic ISL portal.

### Unused/Underutilized Asset Discovery

Identifies underutilized licenses by analyzing usage patterns.

### Cost vs. Usage Analysis

Reveals discrepancies between vendor charges and actual usage and highlights potential savings.

## Optimized License Positioning

Open iT enables users to make data-driven decisions about their software investments.

### Usage Optimization

Maximize productivity and minimize downtime by optimizing license distribution.

### Forecasting Needs

Use predictive analytics to plan and budget for future license requirements.

### Accurate Allocation

Reallocate underutilized licenses to meet high demand, ensuring availability.

### Strategic Procurement

Negotiate better terms with vendors by only paying for what you need.

Combine Hexagon ISL reporting with Open iT to maximize licenses, optimize allocation, and achieve significant cost savings.
